

### Meeting/Sprint Notes for Wavey Kicks

Sprint Goals	User Storys	To Do	Doing	Done
<p>November 30th - The purpose of this sprint meeting is to try to figure out what kind of website I will be doing. I decided to do a website based on selling shoes in an auction style where users add dollars to an hour long auction. I have written out what must be done on the website and also drew out the wireframe of the website and started doing the layout of the website(just html, no css and javascript).</p>	<p>As a user I would want to gain points the more I buy things which will allow me to get some kind of discount off the shoe im buying.</p> <p>As a user I would want to be able to bid on the go also not only just for the desktop.</p>	<p>Create the Wireframe for the website on paper.</p> <p>Add any details where javascript would need to be involved.</p> <p>Make the Layout of the website by trying to copy what was in the wireframe and add little things if need strictly just html.</p> <p>Make 8 pages to the website.</p>	<p>I decided to do the layout of the website using bootstrap since the format was more organized and made the site look good it also helps with formatting the site to be mobile friendly already.</p> <p>I am going to do the html of the website using html elements and the built in bootstrap format.</p> <p>Made the 8 pages of the website which consist of the following: home, auction 1, auction 2, auction 3, contactus, sign up, login, and password recovery page(not added on navbar).</p>	<p>I have completed the wireframe of the website along with the 8 pages needed to make the website- Nov 30, 2019</p> <p>I have completed the layout of the website using html and bootstrap- Nov 31, 2019</p>
<p>December 2nd - The purpose of this second sprint meeting is to try to figure out any</p>	<p>Same as above.</p>	<p>Create javascript for timer on all auction pages.</p> <p>Make a carousel using bootstrap</p>	<p>I am going to add the timer below the image of the shoe along with a button to add</p>	<p>I have completed the Javascript and Bootstrap functions to the website, made</p>

<p>javascript functions or bootstrap that I will need for the website. I want to implement a timer in the auction pages of my website. I will also come up with a color palette based off my logo, and finally come up with a name for the website.</p>		<p>for the three shoes on the home page.</p> <p>Create links to everything and make sure they work and also make sure navbar links work also.</p> <p>Make a recovery page for password that is for show(would need php to store said password along with email).</p> <p>Make a logo along with coming up with colors based off the logo for later use with CSS and come up with a name for a website.</p>	<p>dollar to auction for show(non functional dont have only php to store money) along with buttons to go back home.</p> <p>I am going to make a carousel flipping through each shoe represented in the auction pages.</p> <p>I am going to make sure each link is working properly for all pages in website.</p> <p>I am going to add a page where user can recover their password for show</p> <p>I am going to use a wave logo with text in front using pixlr x to add the text. I then will use imagecolorpicke r to get hex codes from logo. I also will call the website Wavey Kicks.</p>	<p>sure all links worked, got the color template for the website along with a logo and name for website- Dec 4th, 2019</p>
December 6th -	Same as above.	Added the css	I am going to	I have

<p>The purpose of this third and last sprint meeting is to finish up any CSS that needed to be completed also to fix up any code that was not working or errors on any of the web pages.</p>		<p>using the template I made from grabbing logo colors.</p> <p>Changed any background, align any elements, and changed fonts on areas that needed to be changed to make website follow with color and layout.</p> <p>Fix errors that may pop up on pages when loaded Check to see that everything works on the page ex. Links, javascript functions, bootstrap functions, forms linked to email. All buttons works.</p>	<p>add color to the fonts and background of all elements on the webpages. I will center everything and add color to buttons and navbar.</p> <p>I am going to use a stylesheet along with implementing the style tag in areas if needed.</p> <p>I will look over the whole page when finished with the CSS to make sure everything works and flows well so that there are no errors in the console.</p>	<p>completed the website using html, css, javascript, and bootstrap with each page having no errors in them- Dec 8, 2019</p>
